MAGNETIC FACE BEARING ISOLATOR

Mag-D V8

The **MD V8** bearing isolator is the result of our dedicated mission to **increase bearing life.**

IsoMag utilizes magnetically controlled lapped flat sealing faces. The problems of lubricant loss and bearing contamination are resolved, helping achieve and improve maintenance cycle life expectations.

The MD Vg is our most robust cartridge seal for keeping out external contaminants.

THE MD Vg BEST PREVENTS EXTERNAL CONTAMINANTS FROM THE FOLLOWING:

Dirt/Dust
High-pressure washers
Other liquid contaminants

The MD Vg works in multiple lubrication environments:

Oil Splash Oil Flooded
Oil Mist Grease

The MD Vg features a short axial length, and a primary sealing surface rotates with the shaft, and does not damage shaft surfaces! The MD Vg creates a positive, bi-directional seal with or without shaft rotation, on horizontal or vertical applications. It can be used in thousands of applications from 3/4" to 13" shaft sizes. Like all IsoMag Magnum seals, it works as a compact one-piece unit that installs as easily as a lip seal.
